JIT/JIS – ASSURING DELIVERY
ACCURACY AND QUALITY

JUST-IN-SEQUENCE MANUFACTURING WITH ADICOM SOFTWARE

The industry has been reducing its manufacturing depth for years. This transformation from single-part supplier to supplier of complete modules and system units presents the supply industry with new challenges. Configuring your own production pace based on the demands of your customers, automating and monitoring processes, and being linked to the customer in a standardized JIT/JIS transaction demands the use of a flexible and modular IT solution.

Adicom® JIT/JIS software meets the highest availability and quality standards and is used successfully by numerous automotive suppliers both in Germany and abroad.

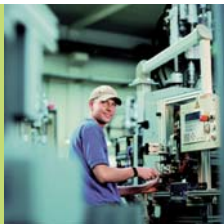

The Adicom JIT/JIS Classic package is a solid basic package for production procedures from simple commissioning to the archiving of data.

The exclusive Adicom JIT/JIS Advanced package offers additional applications for complex, multi-level production processes with direct system connections, including traceability, production control and shipment modules.

HQM Sachsenring GmbH

Jens Ullrich, IT Department

“We opted for Adicom® JIT/JIS in order to optimize processes in the construction department, final assembly and delivery. It guarantees the optimal mapping of all logistics processes, such as the transfer and processing of EDI retrievals from OEM or JIT/JIS order control and sequencing.”

Adicom JIT/JIS Classic

- Basic Package
- SAP Interface Server
- SAP Real-Time Interface
- EDI
- Monitoring, Event Monitor, Alarming via S7 200, E-mail Alarming, Sequence Monitor
- Sequencing
- Label Management
- Reorganization/Archiving

Adicom JIT/JIS Advanced

- Basic Package
- SAP Interface Server
- SAP Real-Time Interface
- EDI
- Monitoring, Event Monitor, Alarming via S7 200, E-mail Alarming, Sequence Monitor
- Sequencing
- Label Management
- Traceability
- Production/Assembly Controlling
- Shipment
- Reorganization/Archiving

Overview of other features

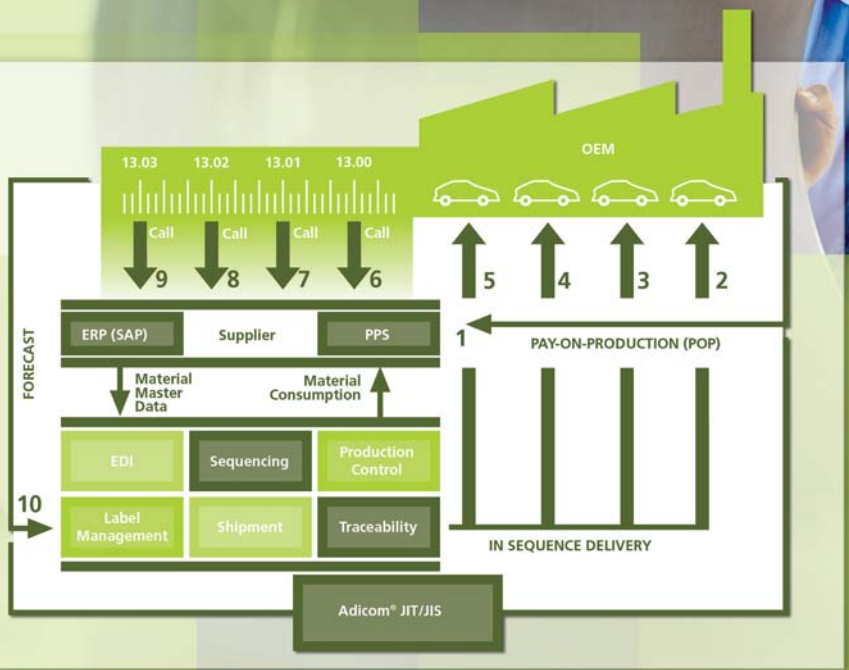

Adicom JIT/JIS offers user management and access authorization, so that you are able to adjust different user groups' access to data to meet individual requirements.

The system is able to support multiple clients, is multilingual, and allows you to administer all relevant data. It features emergency concepts, such as manual call-off orders in the event of the failure of EDI transfer and, in emergencies, alarms you as soon as possible by e-mail or via acoustic and visual signals.

All critical processes can be closely supervised using various monitoring systems. Interfaces to users, specifically in the shop floor area, are designed to meet customer requirements and thereby facilitate efficient working.

Adicom JIT/JIS was designed and developed for high-availability cluster systems (UNIX, Linux, Windows) and thus offers a very high level of security.

We would be glad to demonstrate our industry expertise to you.

Please contact us – we're looking forward to hearing from you.
