

MANAGEMENT INFORMATION SYSTEM (MIS)

Management Information System with OLAP

Do you want:

- The right information for achieving your goals in the right form at the right time?
- The information to be as detailed as needed?

Adicom® Software Suite helps you achieve the following goals:

- Improved productivity
- Reduced set-up times
- Reduced processing times
- Optimized transport paths
- Successfully implementing a continuous improvement process
- Improved condition of facilities
- Increased quality
- Minimized personnel costs
- Minimized personnel absences
- Reduced administration costs

Adicom MIS enables you to pursue these goals and implement the necessary measures.

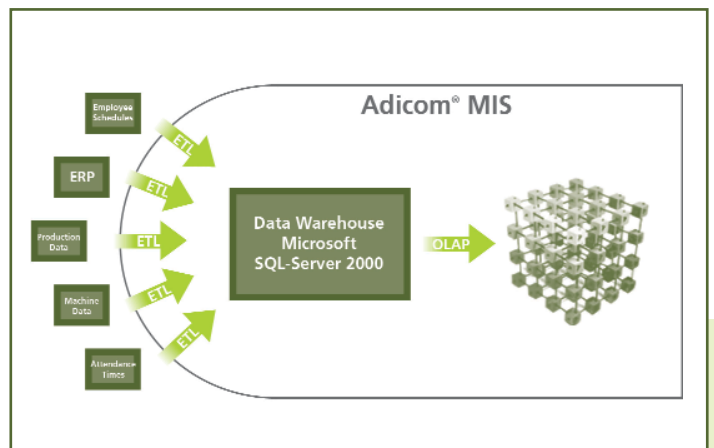

Adicom MIS serves as data storage for all data processed using the Adicom Software Suite. For example:

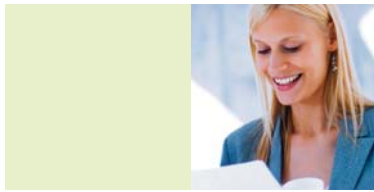

- Personnel scheduling
- Personnel attendance times
- Shop floor data collection
- Machine data collection
- Traceability data

These data are systematically stored and serve as a data base for extensive queries of all types.

ProClarity Desktop Professional is an OLAP client and provides superb tools for the analysis and representation of data stored in the data warehouse. A graphic user interface allows you to easily analyze and query data without having to grapple with the complexity of a modern computer language.

Adicom Software Suite

ProClarity Desktop Professional provides a menu-driven, user-friendly interface that eliminates the complexity of data retrieval for the users. It also enables advanced users to create comprehensive queries themselves.

Your benefits:

- Ad-hoc analysis
- Easy to learn and straightforward use
- Up-to-date data based on Adicom Data Warehouse
- Simple creation of complex queries thanks to a graphic interface
- Numerous options of graphic representation
- Straightforward integration with MS Office products
- Freed capacities for the production system through analysis on the basis of the Data Warehouse

Package contents

- ProClarity license
- Adicom Data Warehouse
- Adicom MIS
- Software installation
- Basic training

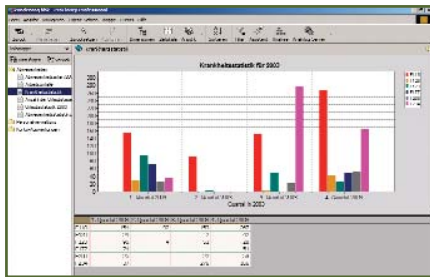

System requirements

Client
