SOFTWARE SUITE

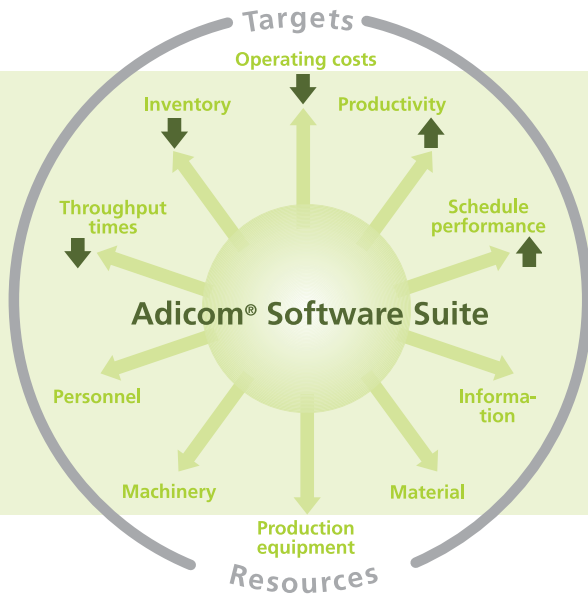

SPEED, SUPERIOR PERFORMANCE AND FLEXIBILITY

Do you want to:

- Reduce throughput times
- Reduce inventory
- Optimize value stream
- Increase productivity
- Improve schedule performance?

In short, you want to use your value-creating resources of personnel, machines, production equipment, material, and information economically in serving your customers.

The Adicom® Software Suite helps you achieve your goals – in the production (Shop Floor), logistics or service areas. It covers all of your resources as a whole and thus offers complete support with executing your processes. The software's high flexibility and upgradability mean that it is able to cope with the challenges faced by your company.

Adicom – the resource manager

The Adicom Software Suite is thus among the leading software solutions in the area of Manufacturing Execution Systems (MES) and can cater to your individual requirements – both simple and complex.

Maximizing capabilities

In the past, improvements to your processes and key business metrics through organizational improvement was sufficient. Adicom Software Suite opens up new possibilities for world-class improvement.

Adicom – Optimal detail scheduling of all resources

ERP-level schedules often allow for one resource bottleneck, whereas reality is usually much more complicated than that.

Adicom Software Suite,

- adapts to all your value-creating resources,
- takes into account all competing procedures,
- keeps your individual optimization criteria in mind

and therefore makes constantly updated, detailed scheduling possible.

Detailed scheduling enables you to map these objectives and make them the basis of process control. You can adapt your specifications to the latest expertise and continuously improve.

Immediate detection and visualization of problems and discrepancies

In reality, good detailed schedules run into problems virtually every day. The result can be higher costs, lower efficiency, downtimes, etc.. You have to react quickly and effectively. In order to do this, you need tools that recognize the status of your processes and resources in real-time.

The tools will compare your scheduling specifications (for example, deadlines) and indicate discrepancies as well as their consequences.

Fast and optimal response to problems and discrepancies

Taking into account the new scenario, you can use Adicom Software Suite to immediately update the detailed scheduling, visualize it, and initiate any measures that may be necessary.

Automation and fine tuning of processes

With Adicom Software Suite, you can control and automate processes according to strategies. Triggered by the continually optimized detailed scheduling, processes are automatically initiated and controlled in a way that is appropriate for your company to reach its objectives.

With Adicom Software Suite, you determine the degree of automation of your company. You can realize your visions in regards to the design and effective automation of your processes.

HOW CAN YOU ACHIEVE ALL THIS?

The Adicom Software Suite always reflects the current state of the art and is constantly being optimized and upgraded as a result of varied experience gained in projects and practice.

It is distinguished by:

- Platform independence with respect to hardware and operating systems
- User-friendly graphical interface
- Expandability
- Modularity
- Its own development environment for fast and flexible expansions that you can easily learn yourself

Adicom Software Suite consists of a variety of integrated but distinct modules that handle the execution of processes, using individual or all resources as a whole.

The module groups are as follows:

Collection modules

These are used for collecting all kinds of data:

- Personnel Time Recording
- Shop Floor Data Collection
- Machine Data Collection
- Quality Data Collection

Resource scheduling and optimizing modules

These are used to administrate and schedule value-creating resources:

- Personnel Scheduling
- Personnel Time & Attendance
- Control Center for all Resources

Process components

To support and control the execution level of processes as a whole, process modules have been developed which are displayed in addition to ERP components, depending on the individual situation:

- Warehouse Management
- Work Schedule
- BOM Management System
- Order Administration
- Maintenance

Interface modules

The Adicom Software Suite can be integrated with well-known ERP solutions, as well as with traditional controllers at the machine level.

Customer-specific development

The execution level is where all companies differ, and where they try to pinpoint their competitive advantages. Standard software can only be a basis for this, and often, does not meet all of the challenges facing your company. Thanks to its intelligent, modular construction, the Adicom Software Suite is easily expandable while still remaining releasable at its basic level.

The modules are integrated with each other. Thanks to a simple yet flexible development environment, different kinds of dependencies among the modules can be created which incorporate external components. This includes machines, transport vehicles, third-party software, etc..

"What we required for our HR planning could not be entirely satisfied by an ERP system. We needed flexible personnel planning that was adjustable to shifts and that could take into account qualifications, time records and a range of other requirements from different departments. Furthermore, the system had to allow technicians to perform personnel planning very efficiently while at the same time guaranteeing the integration of SAP time management including master and transaction data transfer in both directions. The Adicom® Software Suite meets these requirements perfectly. At Saint-Gobain ISOVER, we have been completely won over by Adicom®."

TRW

Dr. Ingo Thiem, Plant Technical
Manager;
Carsten Zehnich, Head of IT

"We are gaining more transparency in production and we are increasing our quality of inventory through the use of the Adicom® Software Suite. The outcome is that we can assure our customers deliveries on schedule and on-time."

Fossil European Service Company

Dirk Decking, Manager Warehouse Eurodome · Josef Otter, Director European Logistics

"Besides our high requirements with regard to time recording and personnel time management, ease of use and clarity for users were the crucial factors which tipped the scales in favor of Adicom® Software. Introducing Adicom® means that we are now able to plan our personnel assignments simply and purposefully according to business division and workload, using the graphical pegboard. In short: The past few months have shown that our decision in favor of Adicom® Software was the right one and that we can upgrade functionality even further!"

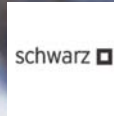

arvato digital services
Marc Stöffler, Human Resources Manager;
Peter Pepping, Head of Indoor Service and Security

"For many years now we've been using Adicom®, the time tracking and personnel time management software. Adicom® is a quality application with good stability and high employee acceptance – these factors assure our continued use of Adicom® in the future."

ARCUS Clinics
Uwe Schmidt, Chief Financial Officer

"The use of the Adicom® Software Suite and our doctor locator system allows us to reinforce the high standard of medical care with professional and patient-oriented personnel scheduling and locating. In a high-performance establishment like ours, top-notch medical care can only be guaranteed in the long term when all systems interact effectively."

Miele & Cie. KG
Thilo Fuchs,
Project Manager for the
Die-Cutting Production
Process

"The new integrated system raises our die-cutting production process to a new level. We can design processes more efficiently and flexibly to create maximal transparency. The Adicom® Software Suite gives us all the functions we need for this classic MES project."

We would be glad to demonstrate our expertise to you.
